ASSESSMENT CHECKLIST

GENERAL INSTRUCTIONS

1. Work individually (+5Bonus Marks) or in pairs.
2. Use **Python** with **Pandas, NumPy, Matplotlib, Seaborn, and Scikit-learn**.
3. You may use the **Internet** for reference (documentation and examples).
4. Submit your work as a Jupyter Notebook file: **YpurNames_Iris_Practical.ipynb**

Step	Tasks	Marks (%)	Decision	Trainer's Comments
1	Defined the problem and objectives clearly (classification of flower species, identification of features and target).	/10	☐ Yes ☐ No	
2	Loaded and described the dataset correctly using Pandas (.head(), .info(), .describe()).	/10	☐ Yes ☐ No	
3	Detected and cleaned data errors (handled missing, duplicate, irrelevant, or outlier values).	/10	☐ Yes ☐ No	
4	Created at least **three data visualizations** (scatter plot, box plot, and heatmap) with clear **interpretations**.	/20	☐ Yes ☐ No	
5	Built and tested a machine learning model (Decision Tree, KNN, or Logistic Regression) using train/test split.	/30	☐ Yes ☐ No	
6	Evaluated the model (accuracy score, confusion matrix, brief result explanation).	/10	☐ Yes ☐ No	
7	Presented short reflection (lessons learned, challenges, and key observations).	/10	☐ Yes ☐ No	
Total		**100 Marks**
